

Geography

You could not have chosen a more vital time to study A Level Geography. The world's economic systems are on a collision course with the natural environment. We need to understand how to work with nature so that the planet's four spheres of life, water, land and air can operate in harmony.

For wider reading, we recommend 'Prisoners of Geography' by Tim Marshall, especially the Chapters on China and The Arctic. For an introduction into the spatial and temporal themes of the advanced level course, read 'Geography A Very Short Introduction' by John Matthews and David Herbert and finally 'Why Geography Matters: A Brief Guide to the Planet' by Nicholas Crane – the title says it all!

All good geographical, sustainable decisions are made using reliable data, so start by investigating Professor Hans Rosling's website [Gapminder](http://gapminder.org) at gapminder.org. Interact with [Global Change Data Lab](http://GlobalChangeDataLab.org) using the link ourworldindata.org, and investigate the importance of protection our [Ocean World](http://tamuedu/ocean-world) at tamuedu/ocean-world link.
